

ABSTRACT OF THE DISCLOSURE

1 A backlight unit comprises a chassis having a bay, wall means
2 defining the bay, an aperture opening to the bay, and an optical panel
3 that includes at least one light management feature. The optical panel
4 has one side forming a wall portion of the wall means. A light emitting
5 structure is placed within the bay to light a two-dimensional area on the
6 one side of the optical panel. The backlight unit also comprises a
7 bracket for quick installation and removal of the light emitting structure
8 through the aperture to and from the bay.
